Maya Chen

Computing Science student | Python workflows and testing

Application focus: AI Engineer - agentic workflows

SUMMARY

- Computing Science student with evidence in Python service development, tool-call workflows and team delivery.

SELECTED AI AND SOFTWARE WORK

- Created a bounded tool-call agent prototype that selected local tools and recorded results before responding.
- Contributed service logic, endpoint design, input validation and automated tests to a team course-planning API.

TECHNICAL SKILLS

- Python, Java, SQL, REST APIs, Git, GitHub, pytest and Jupyter Notebook.

TEAM AND CUSTOMER EXPERIENCE

- Collaborated with a small retail team, answered customer questions and followed written procedures during busy periods.

Prepared from confirmed profile information.
